

Searchlight?

# Searchlight™

Online Intervention Monitoring Tool

Searchlight? is an online intervention monitoring software created for educators who are gathering data on student performance and have multiple schools to administer. Our customers have asked us to create a tool to gather student data and track what is being done to remediate each student. Test Scores, Instructional Recommendations, Instructor Data, Student Attendance, Scheduling Data and Coaching Reports are displayed for each grade in the school. With all intervention information available on one screen, data-driven decisions can be made to determine the best intervention or adjust the intervention if deemed necessary.

Monitoring student data is essential because there is truly no other way to analyze the progress to identify if the gap is closing. Having an organized system to track and enter data allows administrators and instructors to speed up the decision making process because it becomes easier to recognize patterns in achievement gaps and gains. Searchlight™ eases the process of gathering data, progress monitoring and choosing instructional methods with screening and grouping options. By implementing these tools it is easier to make adjustments in grouping and instruction, increasing student achievement and freeing up valuable teaching time.

**A literacy report is generated and available online for each site and updated throughout the year. The report includes:**

- Formative Data results for all students through all three tiers including Curriculum-Based Measurement Data Reporting, State Tests and any other test data that the administrator wants tracked
- Comparative Analysis for each component of Response To Intervention (RTI) including Assessments, Programs, Professional Development, Instructor Delivery and Group Performance
- Sondag System® implementation information (# of teachers per site using Sondag System®;

# of Sondag System® Groups operating; # of students per group)

- Other intervention program information
- Core program information
- Who is doing what, when, and for how long, i.e., Teacher A delivering intervention in School B in Room 392 from 10:30 to 11:15 with three students
- Monitoring teacher fidelity of delivery
- Record of student attendance
- Intervention Scheduling Tool

Data can be gathered and updated by the school or the school can pay a fee for Winsor Learning to gather and update data throughout the year. If the school chooses for Winsor Learning to visit the school for data gathering, a consultant will meet with administrators to analyze the data and maximize the effectiveness of the interventions based on the data.

Consulting services are also available in conjunction with the use of the Searchlight™ Monitoring Tool. Winsor Learning staff visits each site three times a year and discuss the data gathered for each school. The consultant discusses with staff the instructional recommendations and helps focus the proper intervention for those particular students. Grouping and regrouping and instructional adjustments are discussed with administrators and staff.

### **Winsor Learning Searchlight? Costs**

User Fee per Student SL-UF **\$5.00**

Data Entry Fee per Student SL-DEF **\$5.00**

Consultation for Data Gathering and Analysis Visits SL-ANALYSIS **\$2,500.00**

**ANALYZE**

Gather and Analyze Student Data from Assessments

**PLAN INTERVENTION**

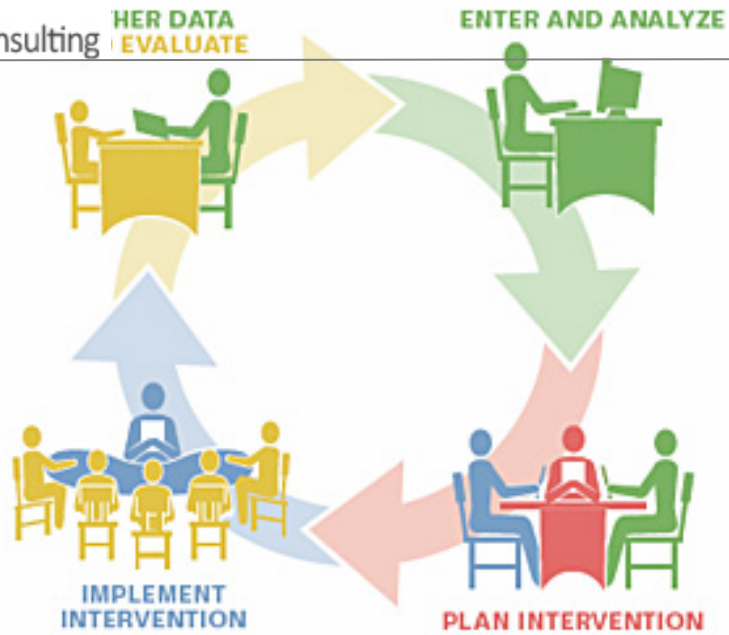

Use Data to Inform Decisions, Create an Intervention Plan and Allocate Resources

**IMPLEMENT**

Implement Plan Using Data Driven Instruction

**EVALUATE**

Is it working? Gather and Analyze data on Student Performance and view reports on Literacy Program to gauge success.
